

Featured Project: Seamore House, Park Lane

Stone Type: Limestone

This major office development on Park Lane fronts on to Hyde Park.

The project involved retaining the full height bay window centre section of the building, the addition of two adjoining full height stone façades on either side and a further two large seven-storey side wings predominantly in glass and stone.

Stirling Stone carried out the supply and hand fix work in limestone to the façades on both the front and rear of the building. To the two large wings, hand fix limestone was used around the whole perimeter of the building at ground floor/basement level and stone-faced pre-cast units to the remainder of the façades.
