

Featured Project: West LB, Woolgate Exchange, London

Stone Type: Slate, Limestone, Granite

Stirling Stone carried out extensive internal works to this office development in the centre of London. At ground floor level, slate and limestone were used to large areas, including reception desks, flooring, wall cladding and feature panels.

The same materials were used through the rest of the building, predominantly to the lift lobbies and auditorium. Granite tops were also supplied for the serveries in the restaurant.
